Conferbot AI Chatbot - User Guide

Version 1.1.0 · Package **conferbot/module-chat** · Module **Conferbot_Chat** · Magento Open Source / Adobe Commerce 2.4.4 and later, PHP 8.1+

1. What the extension does

The extension adds the Conferbot chat widget to every storefront page. Visitors can chat with a bot (guided flows or an AI agent trained on your content) and be handed over to a person on your team. The logged-in customer's name, email and cart are passed to the conversation as context, and the order placed on the checkout success page is reported once, so sales can be credited to the chats that led to them.

A Conferbot account is required to use your own bot (a free plan is available). The extension itself is free. Everything visitors see (flows, AI agent, live chat, colours, launcher, greetings, languages) is configured per bot in the Conferbot dashboard at app.conferbot.com and applied at runtime.

2. Installation

From the Adobe Commerce Marketplace, add the extension to your account, then from the Magento root:

```
composer require conferbot/module-chat
bin/magento module:enable Conferbot_Chat
bin/magento setup:upgrade
# production mode only:
bin/magento setup:di:compile
bin/magento setup:static-content:deploy -f
bin/magento cache:flush
```

Check it is enabled with `bin/magento module:status Conferbot_Chat`.

3. Find your Chatbot ID

- Sign in at app.conferbot.com and open the bot you want on your store.
- Click **Share**, then **Embed into your website**.
- The ID is the 24-character code inside `ConferbotWidget("...")`, e.g. 64a1b2c3d4e5f6a7b8c9d0e1. You can also paste the whole embed code or the dashboard URL; the extension keeps only the ID.
- No account yet? Use the public demo bot ID **691c970890527a0468f9b2c9** to see the widget first.

4. Configuration

Go to **Stores > Configuration > Services > Conferbot**, paste the Chatbot ID, set **Enable Chat** to Yes and click **Save Config**. Then flush the cache.

Setting	Description
Enable Chat	On/off switch. No removes the widget without losing the ID.
Chatbot ID	Required. The 24-character ID, or the embed code / dashboard URL that contains it. The save is refused if no ID is found.
How the Chat Appears	Floating chat bubble (default) or popup window.
Identity Verification Secret	Optional. From Conferbot workspace settings > Security > Identity verification. Each logged-in customer is signed (HMAC-SHA256 of the customer ID) on the server. Stored encrypted; never sent to the browser.
Widget Script URL	Leave the default (https://cdn.conferbot.com/dist/v1/widget.min.js).

All settings work per website and store view (the script URL is global), so each store view can run its own bot. Access needs the ACL resource *Conferbot Chat Configuration*.

5. How it works with caching

The widget block is added to the `before.body.end` container. Cached pages carry only store context; the visitor's identity and cart come from a private customer-data section (`conferbot`), so full page cache and Varnish stay correct for every visitor. Hyva themes are supported. The extension whitelists the widget's origins in `etc/csp_whitelist.xml` and renders its inline loader with Magento's CSP nonce, so the chat also works under strict CSP on checkout.

6. Verify

- Open the storefront in a private window: a chat bubble appears in the corner within a few seconds. Click it and reply to the bot.
- Log in as a customer and add a product to the cart: the conversation in the Conferbot inbox shows the customer's name, email and cart total.

7. Data sent to Conferbot

- On storefront pages where the chat is enabled: the Chatbot ID, platform "magento", store name, URL, language and currency.
- For logged-in customers only: customer ID (mag-<id>), name and email, and, if a secret is set, its HMAC signature. Cart total and item count.
- On the checkout success page, once per order: order total, currency and order number.
- Whatever the visitor types or uploads in the chat. The extension creates no database tables and sets no cookies of its own.
- Privacy policy: https://www.conferbot.com/privacy-policy · Terms: https://www.conferbot.com/terms-of-service

8. Troubleshooting

Symptom	What to check
No bubble	Module enabled; Enable Chat = Yes in the scope you view; Chatbot ID saved; bot published; cache flushed (and Varnish/CDN purged).
CSP errors in the console	Another extension or a server header sets a stricter policy: allow cdn.conferbot.com, wdt.conferbot.com (HTTPS and WSS) and prd.media.cdn.conferbot.com.
Customer shown as guest	Make sure nothing caches /customer/section/load.
"We could not find a Chatbot ID"	Copy the ID again from Share > Embed into your website.

9. Uninstall

```
bin/magento module:disable Conferbot_Chat
composer remove conferbot/module-chat
bin/magento setup:upgrade
bin/magento cache:flush
```

The extension creates no tables. Its settings live under the `conferbot/` paths in core_config_data.

10. Support
